## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 11-23 are rejected under 35 U.S.C. 102(e) as being anticipated by Weber et al.

(US Pub. 2002/0005566).

With regard to claims 11 and 21, Weber et al. disclose a method of fabricating a Group III nitride thin film structure ([0017] to [0046] and fig. 2) comprising the step of:

- Providing a substrate [0019];
- Forming a metal layer on the substrate by supplying an organic metal gas [0020] & [0043];
- Forming a metallic nitride layer by supply a nitride gas to react with part of the metal layer ([0021] & [0031] and fig. 2).

With regard to claims 12 and 22 and in according to claim 11 above, Weber et al. disclose the substrate is made of sapphire [0029].

With regard to claims 13, 15, 19, and 23 and in according to claim 11 above, Weber et al. disclose the metal layer is a Group III metal, which could be aluminum, gallium, and indium [0026].

With regard to claims 14, 16, and 20 and in according to claim 11 above, Weber et al. disclose the metallic nitride layer could be aluminum, gallium, and indium nitride [0027].

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 17-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Weber et al. (US Pub. 2002/0005566).

With regard to claims 17-18 and in according to claim 11 above, Weber et al. disclose the pure metal layer formed on the substrate is a Group III metal [0020] & [0026], but do not disclose the metal layer is a boron layer. However, boron is a Group III metal. Thus, it would have been obvious that boron could be used as a pure metal buffer layer and the Group III metallic nitride deposited on top of the boron metal buffer layer could be a boron nitride.
